November's Focus

As the year winds down, Americans start to reflect on the past year and what things are truly important in their life. That's why it's the perfect time to remind folks that they can live life to the fullest by quitting smoking.

Did you know?

- Smoking causes one out of every three cardiovascular disease-related deaths.
- Most adult smokers want to quit smoking, with nearly 7 out of 10 U.S. adult smokers reporting they wanted to break their nicotine habit.
- CDC offers a Quitline for people who want to stop smoking: 1-800-QUIT-NOW.

Quitting smoking isn't easy. But it's an important step to improving Americans' health. Not only can it reduce the risk of cardiovascular disease – it also reduces the risk of other diseases including cancer, COPD, and diabetes. There are steps that people can take to break the habit. That's why we are asking you to make it a priority to help Americans quit smoking this November.

Benefits of Quitting Smoking:

20 MINUTES after quitting: your blood pressure and heart rate recover from the cigarette-induced spike.	12 HOURS of smoke-free living: the carbon monoxide levels in your blood return to normal.
2 WEEKS to three months of smoke-free living: your circulation and lung function begin to improve.	1 WEEK to nine months of smoke-free living: clear and deeper breathing gradually returns.
1 YEAR after quitting, a person's risk of coronary heart disease is reduced by 50 percent.	5 YEARS after quitting, a person's risk of stroke is similar to that of a nonsmoker.

Help Americans Quit Smoking in November

Most adult smokers in the U.S. – 7 out of 10 – want to quit smoking completely. That’s good news for us in the cardiovascular field as smoking causes one out of every three cardiovascular disease-related deaths. This November, make it a priority to help Americans quit smoking this month.

Breaking the nicotine habit has health benefits no matter how long a person has smoked. Studies show that an individual’s blood pressure and heart rate recover within 20 minutes of their last cigarette. Within 2 weeks to 3 months, those who quit smoking have improved circulation and lung function. In a year, their risk for coronary heart disease reduces by 50 percent. And, after five years, their risk of stroke is similar to that of non-smokers.

If you know someone who is trying to quit, be sure to share these tried and true tips:

- Call the CDC’s Quitline at 1-800-QUIT-NOW
- Talk to a physician about local tobacco cessation resources
- Set a quit date, make a plan, and ask your family and friends for support to carry it through
- Sign up for [Quit Tobacco](#) for motivational messages via text

Quitting smoking isn’t easy. But it’s an important step to improving Americans’ health. Not only can quitting smoking reduce the risk of cardiovascular disease – it also reduces the risk of other diseases including cancer, COPD, and diabetes. So, this November, help someone quit by focusing on the “S” in the ABCS of cardiovascular disease prevention.
